

Bridge Bit

Your Bridge To Financial

**FREEDOM**

# Introduction

The financial world is undergoing a rapid change. Companies, banks and entire nations, are opening up to digital money and the acceptance of cryptocurrencies. Their strong wish however, seeks regulation and full transparency, neutralising the actual advantage of decentralised blockchain technology.

An abstract graphic in the bottom right corner of the slide, consisting of flowing, wavy lines in shades of teal and blue, creating a sense of movement and depth against the dark background.

# Introduction

Never has it been more important as today, to maximise efficiency, security and speed in payment transactions.

Leading crypto exchanges have long recognised this need and have been offering to their customers, so-called debit cards. Some of them have been shut down already, others will be in the future, due to the same reasons, which mentioned above.

Abstract, colorful light trails in shades of blue, green, and purple, swirling and flowing across the bottom right portion of the slide.

## Problems

At one side, this is a smooth system, for integrating digital assets into the payment of your everyday needs.

However, dependence on the exchange contains more and more risks.

These Providers are obliged to comply with regulations, have sovereign rights over customer funds, can freeze entire accounts, set arbitrary individual limits for certain users or are forced to restrict transactions to maximum amounts due to regulatory requirements.

An abstract digital graphic on the right side of the slide, featuring flowing, wavy lines in shades of teal, blue, and purple, resembling a liquid or digital data stream. The graphic is set against a dark background and has a subtle glow.

## About Us

Bridge Bit is a decentralised organisation, a bridge built between end consumer and institution through the power of blockchain and web3, while creating the unique opportunity in making crypto spendable through traditional and well known ways.

All funds are always routed directly to the issuing bank partner, making the process fully independent of any third party. The use of smart contracts on the blockchain ensure the safety of funds at all times.

An abstract digital graphic in the bottom right corner of the slide. It consists of flowing, translucent shapes in shades of teal, blue, and purple, resembling liquid or smoke. The shapes are layered and have a glossy, reflective appearance, set against a dark background.
